PROFESSIONAL TOOLS

2018/19

i-LèD presents the new catalogue **PROFESSIONAL TOOLS 2018/19**, a collection of professional LED luminaires designed for architectural and scenic lighting. Our know-how in the LED lighting industry and our dynamic and modern perception of architectural lighting combine to create a series of highly technological products. A wide range of LED bars, projectors and I-LèD luminaires offering a wide range of different light sources ranging from monochrome, RGB and RGBW to the latest developments in PIXEL Lighting, and animated architectural lighting. The goal of architectural / scenographic lighting is to emphasize the salient features of a building or a monument, creating appealing, pleasant spaces while safeguarding the environment. In order to provide adequate light control, the

fittings must be equipped with optics, reflectors and lenses offering a wide range of professional lighting solutions: from highly focused light beams for professional detail lighting solutions, to wall washing beams suitable for the lighting of monuments for even illumination of walls and vertical display surfaces. Our range of architectural luminaires is able to offer the combined advantages of light quality and energy efficiency. **i-LèD** luminaires are designed to facilitate and speed up installation by using plug & play cables and other state-of-the-art technical solutions. RGB and RGBW fittings are operated and controlled by the latest generation DMX interfaces and controllers, designed by **i-LèD** electronic laboratories or selected by top manufacturers in the lighting industry.

i-Led technology

THE PERFECT LIGHTING

Research and development of the most performing optical systems

Each LED is configured to emit a certain amount of light, but the quantity that is actually obtained varies depending on the optical system fitted in a luminaire. The task of defining the light beam emitted by a fitting is entrusted to a dedicated optical system, whose proven efficiency goes to optimize the luminous output of the source. Thanks to

the know-how acquired over the years through continuous research and development of LEDs and reflectors designed and engineered around LED technology, we are able to offer new technical applications that maximize the lighting design experience in a simple and effective way.

THE PERFECT COLOR

RGWB TECHNOLOGY WITH COLOUR BLENDING BEAMS IN THE OPTICS

The classic RGB LED technology in which the light effect is determined by three single light sources with three red, green and blue led lights has been overcome. **i-LED** constant advances in research has led to a technology achieving better and more uniform colour blending. The colours are in fact combined together within the optical unit thanks to lenses suitably treated and optimized for maximum efficiency, as well as to single and increasingly performing RGWB LEDs with pure white and three RGB colors all in a single diode (red, green and blue).

This solution ensures superior color blending compared to traditional systems offering an endless variety of hues as well as the possibility of getting pure white lighting without any RGB colours. The use of colours is normally governed by common principles that either stimulate or counter a certain mood. RGWB LEDs utilize all the available colour combinations, allowing you to create infinite scenographic possibilities within the same environment by choosing the colour that best suits your mood.

The perfect colour blending takes place within the optics. Clean lighting with homogenous colour is thus obtained from the "starting point", i.e. the beam output.

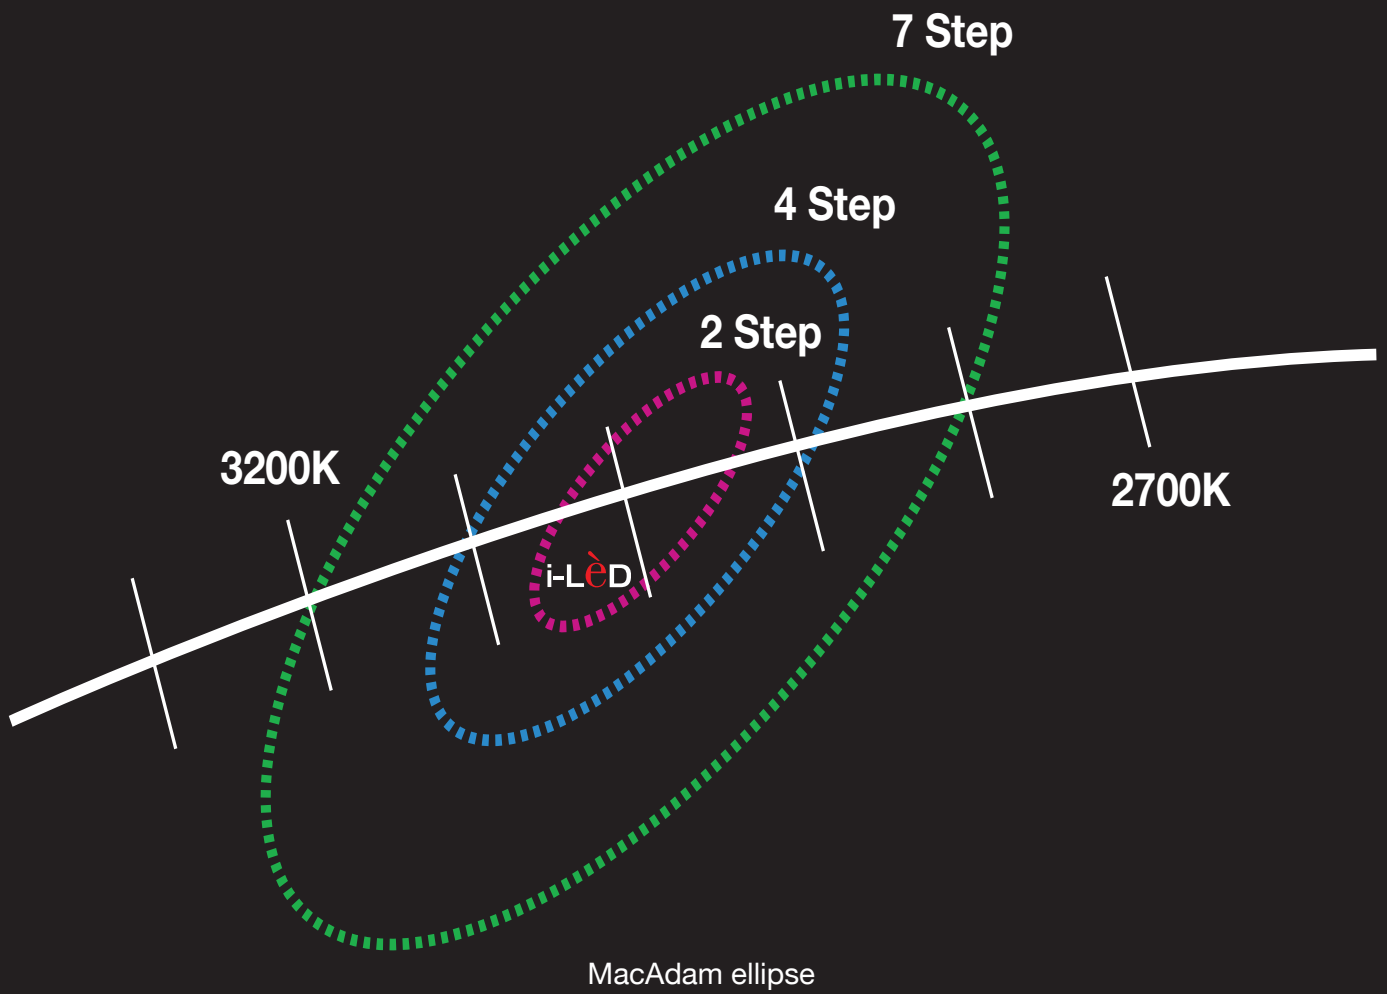

THOROUGHLY SELECTED, HIGHLY RELIABLE LED LIGHTS

Accurate selection means better quality **i-LèD**
offers customers the very best in lighting technology

i-LèD purchases LEDs exclusively from the best manufacturers. These are selected on the basis of luminous efficiency, luminous flux, colour rendering and stability of the electric characteristics over time, these being essential features for mass production of superior quality products.

i-LèD products are fitted with identical LEDs in order that all fittings generate high quality lighting with precise distribution

and little colour distortion. **i-LèD** fittings thus offer efficient lighting keeping their luminous flux for a long time. LED modules installed undergo constant quality checks so as to ensure maximum reliability. **i-LèD** engineers have achieved extremely low maintenance and durable fittings by optimizing passive heat control and making them especially efficient and high-performing as well as durable over time.

HIGH CHROMATIC UNIFORMITY - Mac Adam < 2

By choosing the best LED manufacturers ensuring a constant selection of LEDs lights we guarantee consistency in colours across the different products in the same lighting design project. **Mac Adam < 2** is our golden standard synonymous with quality. With value 2 the difference is barely visible to the human eye and the LEDs are considered of the best quality.

i-LED - MacAdam < 2

Chromatic disomogeneity - competitors

LEDs THAT LAST OVER TIME

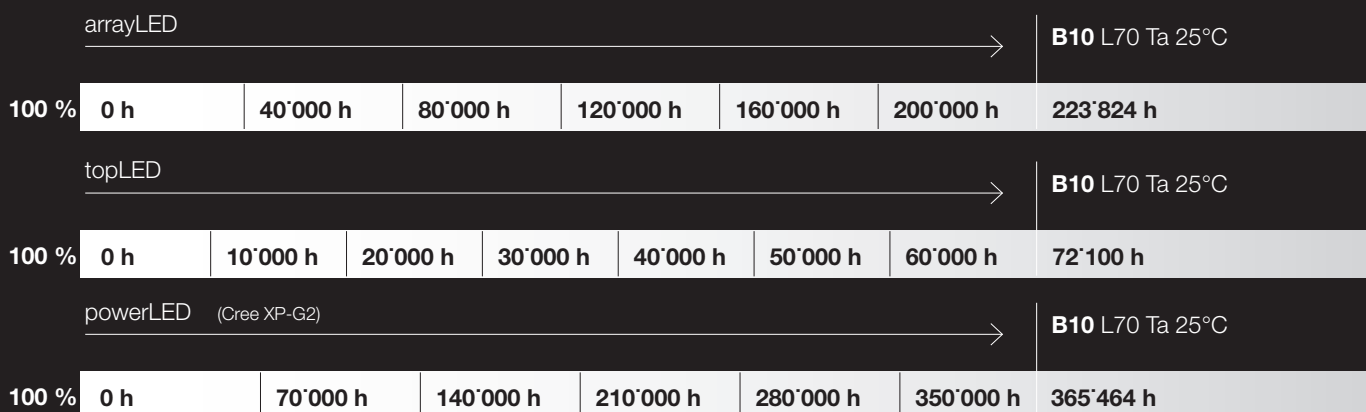

A longer operating life

i-LèD lighting fixtures are designed to have a long operating life. A LED lighting fixture consists not only of the LEDs but also of the power supply and control electronics; the heat transfer elements, which keep the LEDs at a low temperature; the optics; the protection elements and the aesthetic features. The life of the fixture depends both on LEDs and on all the other elements featured. **i-LèD** technicians study every detail in depth to ensure reliability, safety and longevity. For proper operation over time, the electronics (and power supply) must ensure a well-controlled constant current and

avoid failure during the product life cycle: requirements that our **i-LèD** electronic labs achieve by designing and producing high quality drivers. Lenses must withstand light exposure for years without yellowing and degradation due to UV rays; reflective materials must remain firmly in place and remain efficient; the casing must guarantee mechanical resistance to water and dust, and at the same time ensure heat dissipation. When all other causes are excluded, the end of our product life cycle is determined only by the LED chip. **i-LèD** selects only the best LED manufacturers.

EXCELLENT LIFE EXPECTANCY (L VALUE)

Unlike traditional light sources, LED light sources do not tend to suddenly fizzle out at once when they come to the end of their operating life. In fact, LEDs gradually decrease their initial light flux until they exhaust completely over a very long period of time. Thus, the parameter “L” determines the percentage of luminous flux decay in relation to useful operating hours. L70: 223'824h means that once the LED module reaches 223,824 operating hours, it still provides 70% of the initial light flow. The LEDs we use in our appliances have a very long life span and excellent performance (see diagram).

LED i-LED B10
90% reliability of parameter L

COMMON LEDs on the market B50
50% reliability of parameter L

LED EXTREMELY LONG LIFE EXPECTANCY (VALUE B)

In the typical description of LED lights' characteristics, the value “B” followed by a value normally comprised in the range of 10 and 50 indicates the quality of the diode used, as it defines the percentage of LEDs that do not keep the luminous flux unaltered past the 223,824 hour mark.

A LED with a value of L70B10 = 223,824 hours indicates that at reaching 223,824 hours, 90% (B10) of the diodes has a residual luminous flux equal to or greater than 70% of the initial flux (L70).

LED FAILURE RATE (VALUE C)

This value indicates the percentage of LEDs that stop working at the end of their service life. All LEDs used by i-LED have a C0 failure rate.

OUR LEDs

For every lighting requirement there is a solution that guarantees the best relationship between light effect and performance. The LEDs of the world's leading manufacturers are selected and individually tested in our labs, installed in bodies that ensure the correct heat dissipation and fitted

with optical systems that optimize luminous flux. **Linea Light Group** has categorized the main types of diodes following simple and intuitive criteria that help you choose the fittings that best meet your needs.

PowerLEDs

Power LEDs or HP-LEDs (High Power LEDs) are the most suitable type for architectural use or in contexts where more power and high precision of the light beam are required. Depending on the model they can absorb from 220 mA to 1 A, with a luminous efficacy that can reach 120 lm/W. Connectable in a series to obtain highly professional fittings, they are available in a wide range of colours and colour temperatures (CCT) and with different colour rendering indices (CRIs) to fit any lighting requirements. In designing appliances with **powerLEDs** the study of the body is fundamental, particularly of the heat sink, which must ensure proper heat dissipation and the longevity of the LED as a result.

TopLEDs

SMD (Surface Mounted Device) LEDs are the most versatile solution for general lighting. Small diodes are mounted on aluminium PCB printed circuit boards that become real modules that can be fitted on surfaces of different shapes: linear for light bars, round for downlights and square for light panels.

ArrayLEDs

The array LEDs or COBs (Chip On Board) are the most recent development in the solid-state lighting sector. The individual diodes are installed in a single chip, made up of an aluminium or ceramic base and covered with silica gel or epoxy resin. This solution solves many critical issues: the dissipating substrate reduces the operating temperature to the benefit of the LED, while concentrating the diodes on a single surface reduces glare and avoids “scattering” effects, i.e. the shadow refraction typical of separate point sources. The high quality of the **arrayLEDs** are applied in both professional and home architectural fields.

TESTED? APPROVED!

Reliability, high efficiency, safety, long life
are just some of the features of i-LèD lighting fixtures

i-LèD products undergo several strict tests before they get the final go ahead. All tests are carried out in house using

sophisticated tools, under the supervision of highly qualified personnel, in full compliance with the current regulations.

- Junction temperature
- Photometric measurements
- Impact resistance tests (IK)
- Fire Resistance Testing
- Salt spray test
- Walk-over and drive-over resistance tests
- Protection test (IP, IEC 60529 regulations)
- Resistance to solar radiation tests
- Vibration and mechanical stress tests
- Climatic tests

- The following electronic tests are also carried out:
 - Surge tests
 - ESD test
 - DALI compatibility test (as official members of the DALI Working Party of ZVEI)

EVERFINE SPEKTRON Coating

5

YEARS

WARRANTY

i-LèD offers a **5-year warranty** on its products against manufacturing defects, subject to filling in the extension form available at www.linealight.com.

In the absence of activation, the statutory warranty remains valid.

All power supply, wiring and accessories used for product installation shall be original **Linea Light Group** parts or approved by the company.

The warranty will become void if non original or non approved parts are used.

The Athens National Theatre was fitted in **2008** with **i-LèD** fixtures which are all in operation today and have never failed. Ten years of operation are a guarantee of reliability and have allowed considerable energy savings.

9 hours a day x 365 days x 10 years = 32'850 hours of uninterrupted effective operation

Thin66 RGBW | 38 W

With the RGBW version, the profiles blend with the structure creating **colorful scenographic patterns.** Ideal for building exteriors in spaces such as **recesses, cornices and windowsills.**

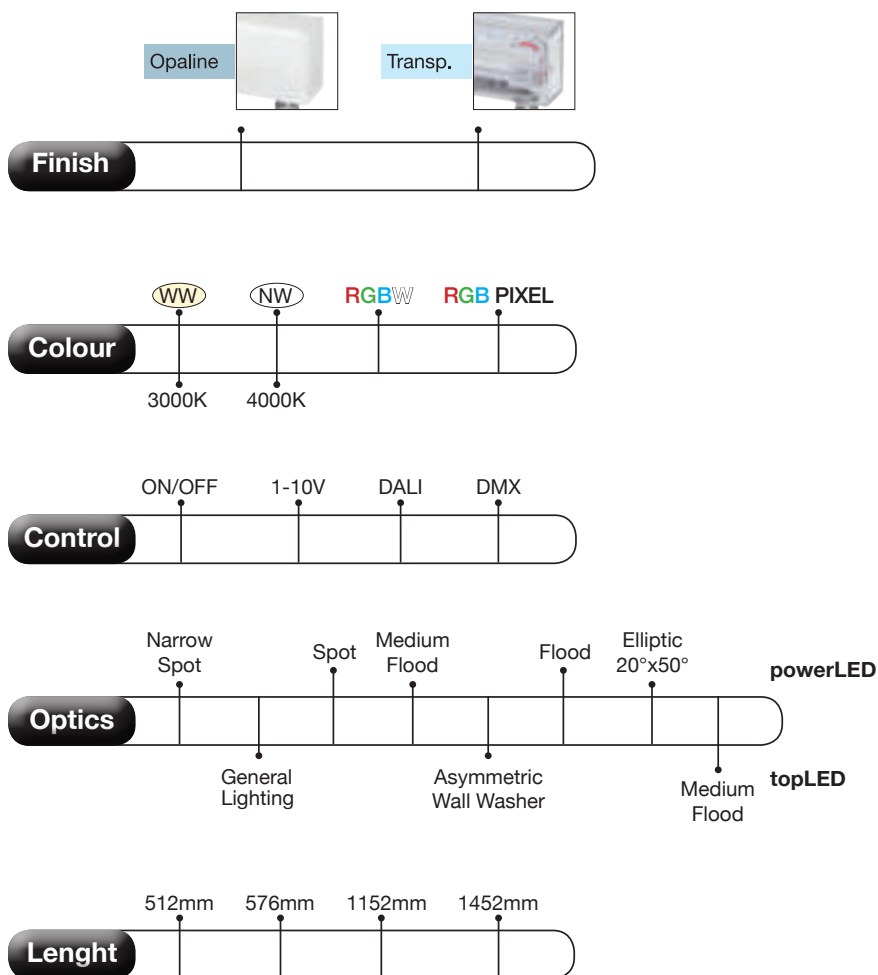

Paseo family

Extremely functional and versatile, **Paseo** is a family of lighting fixtures with varying power and colour temperatures that can respond to a wide variety of lighting requirements.

Multiple arrangements

Paseo is a highly versatile linear profile offering a wide range of optics, lengths, colour temperatures and control systems (DALI, 1-10V, RGBW DMX and RGB PIXEL) Thanks to the many accessories (outer casings) **Paseo** is available in wall-mounted, ceiling-mounted or surface-mounted versions. Moreover the RGBW and PIXEL_RGB models allow the creation of animated, spectacular effects through dynamic control of light sources, resulting in striking architectural lighting applications.

A close-up photograph of an industrial ultrasonic welding assembly. The image shows a vertical metal shaft with a black cable attached to it. The shaft is surrounded by various metal components, including a blue-colored part and a silver-colored part. A small, circular hole is visible on the shaft. The background is blurred, showing other parts of the machinery.

Ultrasonic welding

Ultrasonic welded caps guarantee perfect mechanical resistance and light continuity, ensuring the IP67 degree without using seals. Ultrasonic welding is effected by applying to the parts to be welded a variable normal load and vibrating one part with respect to the other by means of the vibrating group formed by the piezoelectric transducer, the booster at the end of which the sonotrode is screwed. The sonotrode generates friction between the parts by ultrasonic frequency vibration. This intense vibration generates heat and consequently the thermoplastic materials blend thus ensuring welding and assembly.

Compact profile

Paseo was designed to measure only 39mm length and 24mm width, thus achieving a minimalist look that makes it easily adaptable for any lighting project.

Paseo is synonymous with versatility.

Maximum protection

Paseo fixtures with incorporated driver are equipped with an ESD system for electrostatic discharge of up to 4KV.

An electrostatic discharge occurs when, between two close or adjoining bodies, there is a charge transfer that in some cases can cause damage to electronics and LED modules.

Paseo is thus protected from electrostatic discharges (up to 4KV).

The lighting fixture is equipped with **TCS®** valve to prevent damp inside the profile

Stainless steel spring for safe anchoring of **Paseo** profile in the outer casing

PUR thermoplastic cables with 4-pin or 5-pin M12 quick-connect IP67 connectors

Ultrasonic welded plugs ensure perfect mechanical resistance and light continuity

Paseo lighting performance/engineering

Uniformity, harmony and performance

Lighting fixtures available in clear or opal versions. Different types of optics can be used in the clear version. In order to avoid light scattering and consequent light pollution, we use optics that direct the light exclusively toward the surface to be illuminated:

- Linear PMMA optics (Medium Flood and Asymmetric Wallwasher) with "frosting" effect. They guarantee a perfect distribution of the light beam and excellent visual comfort on **topLED** source.
- Single high efficiency optics on CREE **powerLED** (Narrow Spot, Spot, Medium Flood, Flood and Elliptic 20°x50°) light source.

The opal version is only available in the diffused light version for an even distribution of light throughout the casing.

Paseo_L Low Flux

Asymmetric Wall Washer optic

Paseo_X High Flux

Elliptic optic

20° x 50°

Symmetric optic

60°

The individual diodes that make up a **topLED** circuit are closely assembled. This type of LED offers the advantage of continuous lines while maintaining a consistent homogeneity in the light output, with very low power consumption. The control is 24 V with a long life expectancy, in an excellent combination between efficacy and power.

They are arranged more sparsely compared to topLED. The term **powerLED** refers to a particular type of LED lights that are highly performing and have significant joint temperatures. With an even colour temperature, they can be adapted with a variety of optics to create different light beam shades.

Paseo linear lights blend seamlessly in the architecture

Ideal for **marking** or **defining specific areas**, the opal profile emits a diffused and homogeneous light assisting pedestrians without direct glare. Instead, a clear profile associated with different types of optics is used on architectural facades where the **outlines and linearity of the structure are enhanced**.

General Lighting_light_emission

Paseo_M | 25 W | 4000 K

Placed along the perimeter of specific areas or structures, with a **focussed** and **diffused** emission it provides even illumination of walkways ensuring **pedestrians' comfort in a noninvasively way**.

Wall height **H: 4m**
Distance from the wall **D: 0,1m**

Narrow Spot_light_emission

Paseo_X | 15 W | 4000 K

Narrow Spot thanks to its narrow optics feature a light emission that can reach considerable distances. The very narrow beam angle uses the reflective qualities of ceilings and roofs resulting **indirect light** that enhances the lines, features and architectural details of the building.

Wall height **H: 8m**
Distance from the wall **D: 1m**

General Lighting_light_emission

Paseo_L RGBW | 22 W

Light lines with **RGBW diodes** create visually **striking layouts** enhancing depths, surfaces and lines of the building, giving the right emphasis to its impressive appearance.

Paseo solutions

A world of solutions

Highly functional and versatile, the **Paseo** family has 6 different outer casings that can offer a solution for every requirement. It is an ideal choice for the requalification of both historic or modern buildings. **Paseo** is a green and sustainable product designed to foster well-being and create a comfortable, pleasant environment which future generations will also enjoy.

Paseo_L

OVP

TCS system

Paseo_L OPAL

Paseo_L TRANSPARENT

Paseo_L ANTI-GLARING

Technology and aesthetics combined: this is an **ideal solution for signal lighting**, highlighting the perimeters of buildings or pedestrian paths, marking paths, the subdivisions of a space and the delimitation of specific areas. This practical fixture offers a vast choice of accessories and can also be installed in false ceilings or on surfaces using brackets.

Sturdy casing

Polycarbonate casing for diffused lighting with high mechanical resistance (IK08) and high protection rating (IP67).

Light management

Three different optics to meet any lighting requirements: General Lighting optic, Medium Flood Optic or Asymmetric Wall Washer optic.

Continuous light

The power supply outlet passes through the base of the unit in order not to break the light lines aesthetic.

Paseo X

Paseo X_RGBW

The texture of vertical surfaces is enhanced with a **wall grazing** effect (Elliptic optics 20°x50°), thanks to narrow, long beams that illuminate colours and highlight details of decorative materials and architectural elements. The lower the opening of the optics, the more you can leverage the reflectance of ceilings or roofs placed high up for indirect lighting and emphasize the impressive bulk of a structure.

Sturdy casing

Polycarbonate casing for diffused lighting with high mechanical resistance (IK08) and high protection rating (IP67).

Light management

Different types of optics are available to meet any lighting requirement, from symmetrical optics with different beam opening degrees to elliptical optic (20°x50°) ideal for "wall grazing" effect.

Continuous light

The power supply outlet passes through the base of the unit in order not to break the light lines aesthetic.

Paseo accessory | Adjustable fixing clip_I

Pair of fastening clips made of transparent polycarbonate to not alter Paseo light emission. A directional accessory that allows Paseo tilt movement from +90° to -90°.

98771

An example of Paseo installed with adjustable fastening clips (Paseo lighting fixture not included in 98771 code)

Paseo accessory | Adjustable fixing plate_L

Steel plate to fix the two adjustable clips.

Example: Plate used (plate + clip + Paseo) as a support mounted on a surface.

L	L1	98772
300mm	200mm	
Fit to Paseo 512mm and 576mm		

L	L1	98773
950mm	850mm	
Fit to Paseo 1152mm and 1452mm		

The plate (plate + clip + Paseo) can be used as a mobile support without fixing it to a surface (clips not included in 98772 - 98773 codes).

Paseo accessory | Extraction key

Paseo **extraction key** allows its removal from the outer casing. Compatible with all kinds of Paseo outer casings.

Insert the **extraction key** at the end of the profile, between the seal cap of the outer casing and the polycarbonate of the Paseo profile. Pull the **extraction key** out, the Paseo profile will be extracted from the outer casing.

98475

Xenia 2.0 Family

The new **Xenia 2.0** product family features a wide range of linear luminaires with multiple configuration options that fit every lighting requirement. It can be installed on the wall with different types of fixed and adjustable steel brackets. Despite the compact dimensions of the profile, the lighting fixture is also available with integrated ON/OFF driver, DMX, DALI (upon request) or 1-10V (upon request).

The distinctive characteristics of this unique and extremely versatile lighting fixtures are:

- wide choice of optics (Medium Flood, Flood, Wide Flood, Elliptic 20°x50° and Asymmetric)
- different lengths and power packs (topLED or powerLED)
- choice between monochrome versions (warm white or natural white) and multi-colour RGBW

*upon request

Top quality lighting fixtures

The design and production of **Xenia 2.0** includes high quality materials and components. The type of installation required for this products involves a durable structure that is able to adapt to different climatic conditions, from glacial temperatures (-20° C) to high summer temperatures (+ 50° C) without altering their performances. High corrosion resistance is achieved by the **6060 aluminium** alloy treated with 10 microns thick anodic coating.

34 mm

-6060 aluminium alloy
-Anodic Coating (10 micron)

Compact size

A highly-performing profile in anodised aluminium with a compact design.

Xenia 2.0_L
Medium Flux

Xenia 2.0_X
High Flux

34 mm

topLED

The individual diodes that make up a **topLED** circuit are closely assembled. This type of LED offers the advantage of continuous lines while maintaining a consistent homogeneity in the light output, with very low power consumption. The control is **24 V** with a long life expectancy, in an excellent combination between efficacy and power.

powerLED

They are arranged more sparsely compared to topLED. The term **powerLED** refers to a particular type of LED lights that are highly performing and have significant joint temperatures. With an even colour temperature, they can suit a variety of optics to create different light beam shades.

TCS valve and electric protection

Electrical, mechanical and thermal protections ensure **Xenia 2.0** a long operating life. These lighting fixtures are equipped with a TCS® Valve, specially designed to prevent moisture from forming inside the body, while safeguarding the integrity of electrical circuits and LEDs. The **Xenia 2.0** also comes with electrical (**OVP**) and thermal protections that ensure correct operation and maximum safety. They are protected from overvoltage thanks to the **OVP** (overvoltage protection) device that provides surge protection up to 6kV between Phase and Neutral and up to 10kV between Phase /Neutral and Earth. Thermal protection prevents overheating thus ensuring **Xenia 2.0** reliability and long operating life.

Anti-glare effect

Anti-glare

i-LêD technicians have designed an eyelid that eliminates direct glare by shielding light where it is unnecessary. The eyelid shielding option avoids glare and ensures maximum visual comfort for users. It can also be installed after the fitting has been mounted.

Xenia 2.0 linear lights provide high brightness and flexible installation

Different types of optics and brackets designed to create lines of light in **areas that are difficult to access**. They are perfect for enhancing cornices and horizontal architectural details of urban settings and buildings.

Asymmetric Wall Washer_emission

Xenia 2.0_L | 25 W | 4000 K

A light profile characterized by **high brightness and flexible installation**. The diffused emission gives character to structures while illuminating perimeters.

Wall height $H: 6,5\text{ m} \times 2\text{ m}$

General light_emission

Xenia 2.0_X | 19 W | 4000 K

As well as **enhancing the aesthetics of the building**, this item provides basic non-functional lighting to specially **highlight its silhouette** and signal obstacles.

Illuminated wall height L: 3m
Interdistance I: 1,8m

Elliptic light_emission

Xenia 2.0_X | 18 W | 4000 K

The **Elliptic** emission is the ideal optics to **highlight all the characteristics** of illuminated surfaces and thus enhancing the majesty of a location.

Wall distance D: 0.8m

Xenia 2.0

Xenia 2.0 is the ideal item for linear lighting effects. A compact and high-performing profile that, despite its size, is available with integrated drivers for monochrome versions (ON/OFF, DALI or 1-10V) and without drivers for the RGBW version (ideal for creating scenographic effects). **Xenia 2.0** is characterized by high brightness and flexible installation for outdoor lighting. Various types of adjustable and fixed brackets are available as accessories, designed to create **lines of light in areas that are difficult to access**. Available as an accessory also the anti-dazzle eyelid that can be easily installed. Upon request the lighting fixture is available with DALI or 1/10V built-in power supply. **Xenia 2.0** in the powerLED version is available upon request with narrow spot optic (8°).

Passive heat dissipation
Anodised aluminium extruded casing

Light distribution
Six optics are available to create countless lighting effects including aiming of the emission

Anti-glare

The **anti-glare** accessory greatly reduces the front glare of the LEDs. It is ideal in combination with the Asymmetric and Flood optics in wall lighting fixtures. This accessory can be easily installed by the customer even after the assembly of the LED lighting fixture (see Figures 1 and 2).

View of the bar with (fig. B) and without (fig. A) the anti-glare accessory. Note that the light emission is not reduced by eliminating the front glare of the LEDs.

Adjustable fixing bracket

Stainless steel brackets can be adjusted with a high level of precision both in rotation and in height (46mm to 67mm) for an accurate orientation of the light beam.

Steel **98949**

Fixing brackets

Brackets for fixing and rotating Xenia linear spotlights. Polished AISI 304.

Archiline Family

The new **Archiline** family features a wide range of linear lighting fixtures with multiple configuration options that fit every lighting requirement. They can be installed with recessed mounting with steel or aluminium flange or without flange or in the wall version.

The features that make this family of products unique and extremely versatile are:

- wide range of optics (Narrow Spot, Spot, Medium Flood, Flood, Wall Washer and Elliptic 20°x50°)
- different lengths and power packs
- the choice between monochrome versions (warm white and natural white) and multi-colour RGBW.

*upon request

Archiline_F

Top quality products

each **i-LèD** device is tested 100% to ensure its reliability and durability.

The **Archiline** products are siliconized by an automated robot system to achieve optimum results: thickness constancy, and improved application quality are just some of the benefits gained through the use of this system. Once siliconized, they are kept lit in a climatic chamber to stabilize the sealing silicon before the watertight seal is tested.

The **Archiline** production process has been designed by using high quality materials and components. For their type of installation, these products need a durable aluminium body that can adapt to different climatic conditions, from glacial temperatures (-20° C) to extremely high summer temperatures (+50° C) without altering their performance. In order to achieve this level of high corrosion resistance, the **6060 aluminium** alloy is used, which is then treated with a 10-micron-thick anodic coating.

TCS valve and electrical protections

Electrical, mechanical and thermal protections ensure a long operating life for **Archiline**. These lighting fixtures are equipped with a **TCS®** valve, specially designed to prevent moisture from forming inside the body, while safeguarding the integrity of electrical circuits and LEDs (only available in **Archiline_W** versions).

The **Archiline** also comes with a variety of electrical protections (**ESD** and **OVP**) and thermal protections that ensure proper functioning and maximum safety. **ESD** protects against electrostatic discharge up to $\pm 30\text{KV}$. What is an electrostatic discharge? An electrostatic discharge occurs

when, between two close or adjoining bodies, there is a charge transfer that in some cases can cause damage to electronics and LED modules. The **Archiline** products are also protected from overvoltages thanks to the **OVP** (overvoltage protection) device that provides surge protection up to 6kV between Phase and Neutral and up to 10kV between Phase/Neutral and Earth. Thermal protection prevents overheating thus ensuring **Archiline's** reliability and long operating life. The lighting fixtures cables are equipped with the exclusive **Aquastop** sealing system (excluding the **Archiline_W** version).

Dark-light

i-LèD technicians have designed special **dark-light** shields that eliminate direct glare by shielding light where not needed. A lighting fixture equipped with the **dark-light** shield does not dazzle the observer thus ensuring maximum visual comfort while maintaining excellent efficiency. In addition to

avoiding glare, this component creates a spot of lights free from flaws and reduces light pollution in outdoor spaces, reducing night-time lighting, thus safeguarding the environment.

Optics for all your lighting requirements

The **Archiline** products feature a wide range of optics that allow them to respond appropriately to any lighting need.

The available optics are:

- Symmetrical optics: **Narrow Spot, Spot, Medium Flood and Flood**
- Elliptical optic: Elliptic 20°x50 °
- Asymmetrical optic: Asymmetric Wall Washer

Elliptic 20°x50° is the ideal optic to remarkably enhance all the features of a wall

The **Asymmetric Wall Washer** optic (asymmetric light beam) allows for a completely homogeneous wall effect

Symmetrical optics capable of emitting vertical beams defined by their width offering the choice between Narrow Spot, Spot, Medium Flood and Flood. Ideally suited to highlight architectural elements and clearly define light and shade.

All these optics feature a very high reflectance and efficacy. The **Asymmetric Wall Washer** optics system (asymmetric light beam) produces a fully homogeneous effect on the wall, thus avoiding any trails of light or separate beams that are typical of the linear lighting fixtures with visible LEDs. The **Asymmetric Wall Washer** optics make the illuminated surface flat. Luminaires with **Asymmetric Wall Washer** optics are generally fitted 30 cm away from the wall. **Elliptic 20°x50°** is the ideal optics to highlight all the features of the wall, producing light

and shade effects rich in contrasts and enhancing the shape of the walls where the light is projected. Luminaires with **Elliptic 20°x50°** optics have been designed for grazing lighting and shall be fitted close to the wall (less than 30cm). The optics of the **Archiline** range also feature a **Spot** version, which produces neat vertical beams with a lighting width that can be chosen from **Narrow Spot**, **Spot**, **Medium Flood** and **Flood**. Suitable to highlight architectural elements and create a clear distinction between light and shade.

Linear lighting plays a complementary role in a technical lighting design project,

since it highlights the vertical surfaces of a room and the volumes of the objects contained in it thanks to the **different opening of the beam angle** and the **luminous intensity** adjusted to the space.

Elliptic_light_emission

Archiline_F | 19,8 W | 4000 K

It is the ideal optics to remarkably enhance all the **features of a wall**.

Wall height H : **4,5m**
 Distance D : **0,3m**
 Interdistance I : **0,2m**

Asymmetric Wall Washer_light_emission

Archiline_F | 19,8 W | 4000 K

It allows for a completely **homogeneous effect** on the whole illuminated surface.

Wall height H : **6m**
 Distance D : **0,15m**
 Interdistance I : **0,2m**

Narrow Spot_light_emission

Archiline_F Anti-glare | 19,8 W | 3000 K

It produces neat vertical beams. Suitable to **highlight architectural elements** and create a clear distinction between light and shade.

Window height H : **7,5m**
 Distance from wall D : **0,15m**

Archiline_F

Powered by

A ground recessed profile that is extremely resistant and reliable, **ideal for drive-over areas**. **Archiline_F** is available with various **types of optics, lengths and powers**. The bar is available in either **single colour** (natural white or warm white) or **RGBW** for impressive colour effects (colours are blended and uniformly distributed). The lighting fixture is available on request with a built-in DALI or 1-10V power supply. Bar with fast IP67 connectors.

Passive heat dissipation
Aluminum body

Light distribution
There are six optics available for maximum design flexibility

Sturdy lighting fixture - IK10
Equipped with 12 mm thick tempered glass cover, black serigraphy along the edge for maximum visual comfort

Archiline_FL

A ground recessed profile that is extremely resistant and reliable, **ideal for drive-over areas**. This profile is fitted with a glass silk-screened in white ceramic paint for a perfect diffusion of the light. The bar is available in either **single colour** (natural white or warm white) or **RGBW** for impressive colour effects (colours are blended and uniformly distributed). Available in different lengths and versions, **Archiline_FL** is a path-marker used by architects and lighting designers in parks, squares, gates and public places of all shapes and dimensions.

Passive heat dissipation
Aluminum body

Light distribution
Lighting fixture with diffused light, ideal to create lighting paths by arranging the bars in a continuous row. Under a visual point of view, there are no lighting breaks between one bar and the other

Sturdy lighting fixture – IK10
Luminaire equipped with a toughened glass cover (12mm thick), coated with non-slip white ceramics to obtain a homogeneous diffused effect and reach maximum safety

Archiline_FL is a drive-over profile with a resistance to static load up to **5000kg**, given by specifically designed outer-casings.

Archiline_FL is an ideal lighting fixture to create continuous rows of light.

Archiline_FL is equipped with a non-slip glass. For further information, please contact the manufacturer.

Archiline_W is a profile equipped with a directional stainless steel graduated bracket, whose installation distance from the wall can be adjusted.

The temperature of the product surface is not higher than 40°.

Archiline_W is equipped with IP67 push-fit connectors for a quick and safe installation.

Archiline_W PRO

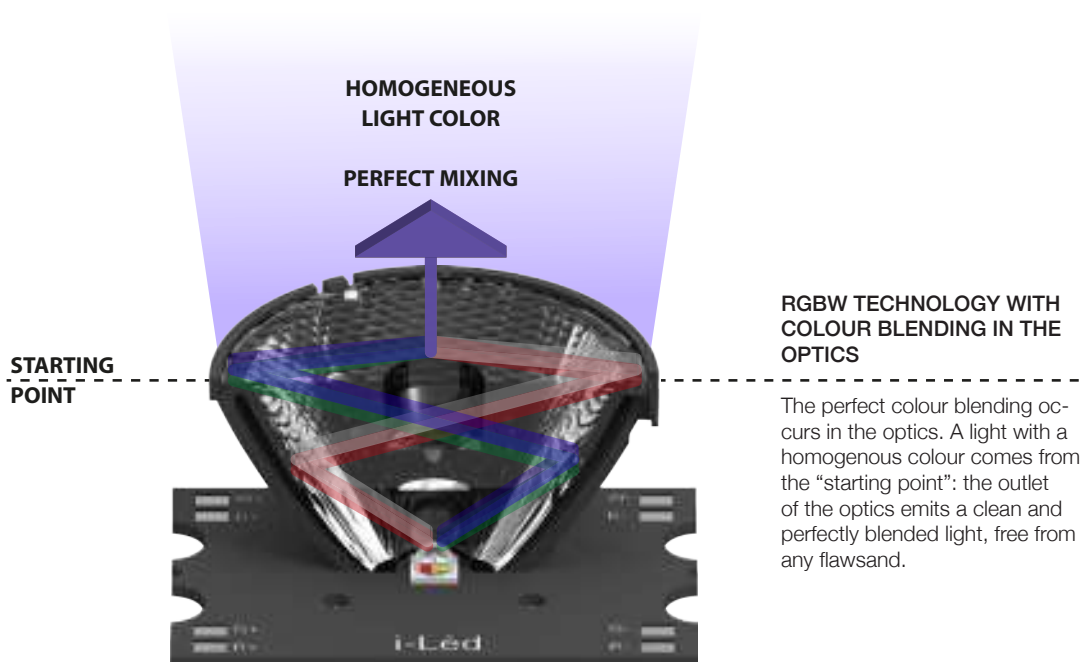

Dark-light

i-LèD technicians have designed special **dark-light** shields that eliminate direct glare by shielding light where not needed. A lighting fixture equipped with the dark-light shield does not dazzle the observer thus ensuring maximum visual comfort while maintaining excellent efficiency. In addition to avoiding glare, this component creates a spot of lights free from flaws and reduces light pollution in outdoor spaces, reducing night-time lighting, thus safeguarding the environment.

The perfect colour

Leaving behind the concept of the traditional RGB LED, whose lighting effect is determined by three individual light sources with three LEDs, red, green and blue respectively, i-LèD constantly makes some steps forward in R&D, since it has developed a technology with improved, more homogeneous colours blending. Indeed, colours are combined together in an optical unit, thanks to suitably treated lenses optimized for a particularly high efficacy and more and more performing **RGBW** LEDs, where a single diode gathers together pure white and the three RGB colours (red, green and blue); all this allows to gain a better colour blending compared to traditional systems, as well as to produce not only an endless variety of colour nuances, but also a pure white that is not affected by RGB colours.

RGBW TECHNOLOGY WITH COLOUR BLENDING IN THE OPTICS

The perfect colour blending occurs in the optics. A light with a homogenous colour comes from the "starting point": the outlet of the optics emits a clean and perfectly blended light, free from any flaws.

This new high-power LED linear spotlight marks a new chapter in the history of spotlights,

thanks to its luminous flux of **over 11000 lumens per metre** and its linear shape, this lighting fixture sets new standards in terms of affordability and efficacy (**100lm/W**).

They stand out not only for their long-lasting LEDs and drivers, but also for their optical system made from wear and maintenance free materials. We have developed highly performing optics for different situations to distribute **elliptic** or **narrow light beams** to meet any lighting design requirement.

Spot_light_emission

Archiline PRO | 35 W | 4000 K

Ideal to light **large vertical surfaces**, these narrow optics focus their powerful light beam and take it far away.

Facade height **H: 40m**

Elliptical emission to generate a **wall grazing effect** on large areas.

Tower height H: 25m

Archiline_W PRO

OVP

TCS system

Powered by

A lighting profile featuring a **high brightness** and a **flexible installation** for the outdoor lighting of buildings. **Archiline_W PRO** features a high efficacy (100 lm/W) and it is the best lighting fixture to light very high walls. A stainless-steel directional graduated bracket allows to easily fasten it. Equipped with a 5-mm thick extra clear toughened glass cover and silk-screened in black along the edge for a maximum visual comfort. The RGBW versions make use of a DMX protocol, whilst the ON/OFF versions are fitted with this protocol upon request only. Lighting fixtures equipped with a special dark-light to grant a top level visual comfort. The lighting fixture is available on request with a built-in DALI or 1-10V power supply.

Passive heat dissipation
Extruded anodised aluminium casing

Light distribution
Broad range of available optics to create numerous lighting effects. Upon request, this luminaire is available with different optics from those in the catalogue.

High protection
Linear screen in extra clear toughened glass, silk-printed in black

Cove lighting

Archicove

Designed to be used as **cove lighting** to light side gorges and ravines, which can be found in hotels, museums and worship places. An **extremely flexible lighting system**, which can be easily tilted by setting the rotation angle of the LED pipe. Black linear symmetric silk-screen printing designed to obtain a perfect light beam without any stray light to avoid the fragmentation of the light beam. Upon request, the item is available with a fitted driver in a DALI or 1/10V version.

Passive heat dissipation
Extruded anodised aluminium casing

Light management
Polycarbonate diffusers that receive the light beam and blur its edges

Practicality of installation
Base for surface mounting, also without fastening screws

Archicove

Luminaires equipped with **plug-and-socket** connectors, designed to quickly install a continuous row.

Luminaire to light vaulted-ceilings (**cove lighting**); possibility to precisely adjust the light beam.

This type of item has been designed to be used as cove lighting or to light side gorges and ravines,

which can be found in hotels, halls, museums and worship places. An **extremely flexible lighting system**, which allows to adjust the tilting angles of the base and rotate the LED pipe.

Asymmetric Wall Washer_Light_emission

Archicove | 27 W | 4000 K

When applied to the upper surface of the perimeter cornice, it gives a **soft, nuanced and suggestive** light to the room thanks to the Wall Washer optics and the consequent indirect diffusion, given by the white ceiling.

Medium Flood_light_emission

Archicove | 27 W | 4000 K

When installed in the recessed perimeter generated by the false ceiling, Archicove profiles are almost hidden. Thanks to the directional **Medium Flood optics**, light is directed to the wall underneath, thus highlighting what you wish to illuminate.

Wall height $H: 3\text{ m}$

General_light_emission

Archicove | 27 W | 4000 K

Diffused light directed to the vaults of the arches, which spread the light to the room underneath with a **nuanced** and **soft effect**. Ideal integration in the architecture, which is non-invasive to the human eye.

Arch height $H: 5\text{ m}$
Arch width $L: 3,5\text{ m}$

RGBW

Projectors

The accent lighting of green areas, either gardens with lots of details or large parks, requires weather resistant professional equipment,

which must be also physically strong and with a light power that is suitably **focused on the main elements** of the composition. Thanks to **narrow emission angles** and spotlights that illuminate from the bottom, it is possible to slender the shape of very high trees or monument, also reducing light pollution to a minimum. The **adjustable optics** allows to adapt the width of the emission and can be considered as a universal and extremely flexible lighting tool, particularly suitable for temporary installations in green areas.

Medium Flood_light_emission

Periskop | 17 W | 4000 K

The compact size of this lighting system is particularly suitable to light **small and medium seasonal trees**. It highlights the change of the trees according to the different seasons by enhancing both their dense and colourful crowns and their naked branches.

Luminaire distance: **1m**
Tilt: **+15°**

Spot_light_emission

Pixar RGB | 24 W

Lighting that can enhance all the garden elements, such as **statues as well as simple and well-structured trees**, the flexibility of its casing makes it versatile and easy to direct.

Luminaire distance **D: 1m**
Tilt: **+10°**

Narrow spot_light_emission

Prolamp RGBW big | 130 W

A combination of high power and compact dimensions, the ideal solution to **highlight large walls and structures**. Tilting and mounted on a bracket, it is simply perfect to create lighting accents, also from a **very far distance**.

Facade height **H: 40m**
Distance **D: 1,2m**
Tilt: **+5°**

Prolamp

Prolamp

OVP

TCS system

Range of tilting projectors equipped with stainless steel bracket. Ideal for creating **accent lighting** even at **great distances** thanks to narrow beam optics. Available in monochrome or RGBW versions, these products are designed to illuminate commercial, public and industrial areas. The RGBW and monochrome projectors are equipped with a double quick-connector cable (male-female) and are therefore suitable for connecting a continuous row of lighting fixtures.

Passive heat dissipation
Aluminium casing

Dedicated optics
Four optics available for optimum design flexibility

Arch - Up Light

Arcada_X

Perfect for arches, lintels or even jambs, statues and reliefs.
An indirect lighting with a homogeneous intensity involving the entire structure right from its base can be obtained through a photometric solid that **precisely follows the arch intrados**, avoiding unaesthetic hot spots and glare and **minimizing light pollution**.
Arcada_X is available in two versions:

- white monochrome version with integrated driver
- RGBW version with non-embedded driver and controller

Passive heat dissipation
Die cast aluminium casing

Light management
Arch-shaped emission with a very narrow shape of the photometric solid coming out of the diffuser shorter side

Specialised functionality
Ideal lighting for windows and depressed arches with no glare or light pollution

Pixel

OVP

TCS system

ATTENTION

To all our clients we offer full support and assistance from design to after sales to ensure the best possible service.

The new **i-LèD PIXEL RGB** technology allows to create RGB dynamic lighting animations. The DMX control allows to create various lighting scenic designs for small and large installations. Thanks to its multiple fixtures, it is possible to install this handy luminaire also in false ceilings or in surfaces with brackets.

Sturdy casing

Polycarbonate casing for diffused lighting with high mechanical resistance (IK08) and high protection rating (IP67)

Light management

Diffused emission that grants a balanced light, yet multi-colour and uniform in its chromatic variations

Continuous light

The power supply outlet passes through the base of the unit in order not to break the light lines aesthetic

Paseo_PIXEL RGB Lighting performance & engineering

The i-LèD Paseo PIXEL RGB bar redefines the surrounding landscape through the creation of dynamic lighting effects. Every single RGB LED can be controlled individually, the available versions are **Paseo PIXEL RGB 576mm** with 32 RGB full-color LEDs, or **Paseo PIXEL RGB 1152mm** with 64 RGB full-color LEDs

2 LED x PIXEL

To guarantee a top-level flexibility and an outstanding efficacy in terms of control, a single product allows for multiple resolutions; it is possible to vary the LED and Pixel ratio based on the size of the installation.

Pixel is the RGB element that can be individually controlled.

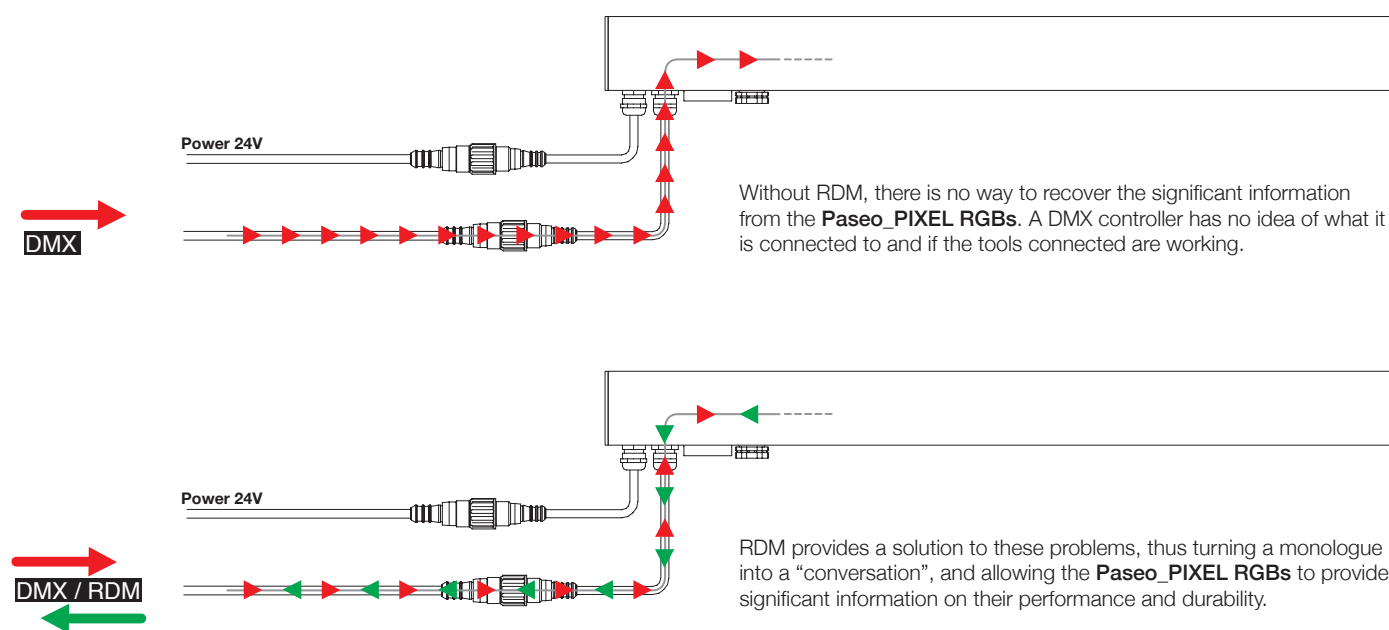

At its maximum resolution, the 1152mm **Paseo_PIXEL RGB** will have 64 independent pixels, whilst the 576mm one will have 32 independent pixels. At its minimum resolution, 1152mm **Paseo_PIXEL RGB** will be made up of 4 independent pixels, whilst the 576mm one will be made up of 2 independent pixels.

The resolution setting can be made through the **RDM* (Remote Device Management)**, a system permitting the bidirectional communication of lights. The device recommended for this kind of operation is **Enttec Pro Mk2**.

THE TABLE IN THE FOLLOWING PAGE SUMS UP ALL THE POSSIBLE RESOLUTIONS.

What is **RDM***?
Remote-Device-Management

It is an extension of a DMX512 protocol that permits a bidirectional control of the information, by means of a feedback from the lighting devices.

It should be highlighted that a single DMX signal controls maximum 512 channels, such a grouping is normally called universe.

When looking at the table, and considering the extensive use of the DMX channels with resolutions of 1, 2 and 4 LEDs per pixel, you can notice that **i-LèD** has developed a system that allows to manage 4 DMX universes with the same signal line. The solution, named DMX2048, requires a specific **i-LèD**.

See diagrams  192-193

EXAMPLE	576 mm (32 LEDs RGB)	1152 mm (64 LEDs RGB)	Pixel-Pitch
1 LED x Pixel	32 PIXEL RGB / 96 CANALI DMX	64 PIXEL RGB / 192 CANALI DMX	18 mm
2 LEDs x Pixel	16 PIXEL RGB / 48 CANALI DMX	32 PIXEL RGB / 96 CANALI DMX	36 mm
4 LEDs x Pixel	8 PIXEL RGB / 24 CANALI DMX	16 PIXEL RGB / 48 CANALI DMX	72 mm
8 LEDs x Pixel	4 PIXEL RGB / 12 CANALI DMX	8 PIXEL RGB / 24 CANALI DMX	144 mm
16 LEDs x Pixel	2 PIXEL RGB / 6 CANALI DMX	4 PIXEL RGB / 12 CANALI DMX	288 mm

Resolution and Pixel-Pitch

Changing the Resolution of a Paseo_PIXEL means substantially altering the **size of Pixel** and **Pixel-Pitch**. Large **Pixel-Pitches** are used in installations where accent lighting is required or in general entertainment applications, to create Wall Washing effects or highly scenic compositions that enhance the edges, depth, and characteristics of the building. With regard to applications capable of playing videos or images, Pixel size is determined by the maximum and minimum viewing distance and the resolution of the video itself.

Graphics

Graphics reproduced on Paseo_PIXEL RGB lines

Resolution

* It is possible to keep the **Pixel-Pitch** size just like the **Lines distance** between the **Paseo_PIXEL**, however, as you can see in the picture, a great result can be obtained by extending the lines much more. The human eye can correctly distinguish the images thanks to the high density of horizontal Pixels. In the example, a double **Lines distance** has been used as compared to the **Pixel-Pitch**. The same goes when the **Paseo_PIXEL** are directed in a vertical position. It is important to keep, however, a high density of Pixels along one direction and “dilute” it along the other.

Some guidelines for the Pixel-Pitch sizing are reported hereunder:

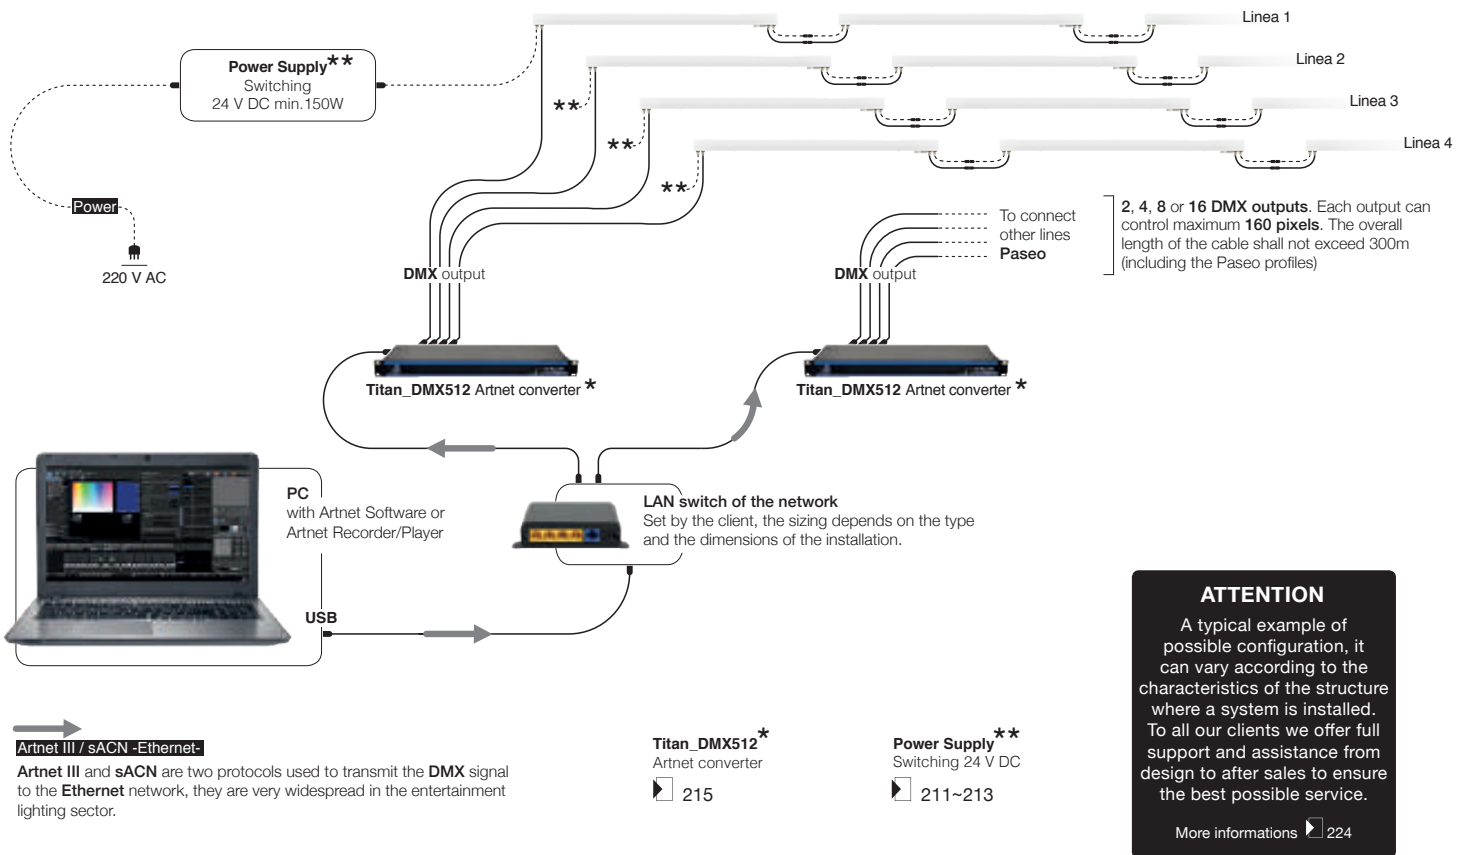

The following calculations and examples are general guidelines to determine the minimum and maximum viewing distances when you wish to play a low-resolution video with the **Paseo_Pixel** RGBs.

- To determine the minimum viewing distance, multiply the size of the **Pixel-Pitch** times 100 units. For example, if the **Pixel-Pitch** is 36 mm, the minimum viewing distance is equal to 3.6 m.
- To determine the maximum viewing distance for discernible videos, it is necessary to multiply the height of the screen by 20 units of distance. For example, if the screen is 30 m high, the maximum recognizable viewing distance for the video will be 600m.
- LED display videos can be viewed despite the maximum viewing distance for the discernible videos. To determine the maximum viewing distance for a suitable visual impact, multiply the height of the screen by 50 units of distance. For example, if the screen is 20m high, it will continue to create a visual impact up to 1000m.

However, it is possible to obtain a good visual impact up to 50 times the height of the screen also by overcoming the maximum viewing distance mentioned in the previous point.

Example of standard DMX512 connection:

For relatively simple projects with low densities of Pixels, we recommend using the Artnet/DMX controller. These controllers feature 2, 4, 8 or 16 DMX ports. **Each port/output can control up to maximum 160 pixels and the overall length of the cable shall not exceed 300m (including the Paseo profiles).** The frame rate of the animation supported is equal to 40 frames per second.

For each line it is possible to connect a number of Paseo_pixel RGBs in the following configuration:

Version	1 LED pro pixel max conectable Paseo_	2 LEDs pro pixel max conectable Paseo_	4 LEDs pro pixel max conectable Paseo_	8 LEDs pro pixel max conectable Paseo_	16 LEDs pro pixel max conectable Paseo_
576 mm (32 LEDs) 	5x	10x	21x	42x	85x
1152 mm (64 LEDs) 	2x	5x	10x	21x	42x

For each DRIVER (minimum switching driver 150W) the maximum number of Paseo_PIXEL that can be connected to the same power supply/signal line varies according to the power of the Paseo_PIXEL used. It is also possible to have mixed connection solutions among Paseo_PIXEL with different powers, as long as the 96W limit per power supply channel is not exceeded.

Example of connection with an own DMX2048 system:

For complex projects with high densities of pixels, we recommend using a "PIXEL controller". This controller is equipped with 4 or 16 RS-485 ports (DMX 2048).

Each port/output can control up to maximum 640 pixels and the overall length of the cable shall not exceed 80m (including the paseo profiles).

The frame rate of the animation supported is equal to 40 frames per second. The use of the DMX2048 system for structured systems makes the installation of the Paseo PIXELs much easier and cheaper. Compared to the DMX512 solution, the resolution of the Paseo PIXELs being the same, it is possible to control four times the amount of the devices with the same cable. Therefore, it is possible to cover four times the linear distance.

ATTENTION
 A typical example of possible configuration, it can vary according to the characteristics of the structure where a system is installed. To all our clients we offer full support and assistance from design to after sales to ensure the best possible service.

The total 576mm Paseo_PIXEL RGBs is 40x	To be used with the 1152mm version. Connect maximum 10x 576mm Paseo_PIXEL RGBs every 1152mm 15x. The total 576mm Paseo_PIXEL RGBs is 80x
1152 mm (64 LEDs) 	10x	20x	40x	80x	160x

For each DRIVER (minimum switching driver 150W) the maximum number of Paseo_PIXEL that can be connected to the same power supply/signal line varies according to the power of the Paseo_PIXEL used. It is also possible to have mixed connection solutions of Paseo_PIXEL with different powers, as long as the 640-pixel limit per signal line and the 96W limit per +24V power supply line are not exceeded.

ATTENTION
To all our clients we offer full support and assistance from design to after sales to ensure the best possible service.
224

LED luminaires with **RGBW** technology and 4-channel integrated control to directly manage colour and its dimming. The item can be installed outdoors, for example on the walls of buildings by means of various stainless-steel fixtures. Push-fit connectors are used to connect them. Once the network of **Pixie** spotlights is installed and connected, it is possible to control each spotlight individually to create lighting scenes by means of a software. Power is supplied using the same cable of the signal.

Passive heat dissipation

Die-cast aluminium casing with open-pore oxidation treatment and embossed RAL9006 powder coating

Light diffusion

Opal PMMA dome for best diffusion of light

Push-fit connectors make the installation stage easier and faster

Lighting fixture equipped with a **TCS** valve, which has been specifically designed to avoid moisture in the casing and to protect the integrity of electric circuits and LEDs

Pixie_PIXEL RGBW

Lighting performance/engineering

Example of connection:

A well-structured system of **Pixie_PIXEL** can be controlled via DMX/ RDM, thanks to dedicated control boxes. If a standard technology is used (DMX / RDM), there are no limits as to the control system to be used. It is not necessary to provide an address for each **Pixie_PIXEL**, since the operation is carried out automatically. The frame rate of the animation supported is 40 fps.

ATTENTION
 A typical example of possible configuration, it can vary according to the characteristics of the structure where a system is installed. To all our clients we offer full support and assistance from design to after sales to ensure the best possible service.
 More informations 224

Artnet III / sACN -Ethernet

DMX signal

Titan_DMx512*
 Artnet converter
 215

Power Supply**
 Switching 24 V DC
 211~213

Artnet III and sACN are two protocols used to transmit the DMX signal to the Ethernet network, they are very widespread in the entertainment lighting sector.

For each line it is possible to connect a variable number of Pixie_PIXEL depending on the version (small or big) 48 VDC driver, maximum overall power permitted 240W for each line

Versione	Power	Max Pixie connectable in a current line	Max Pixie connectable in a signal line	DMX-RDM cable length
small	3,4 W	64	128 PIXIE	The overall length of the cable between two Pixie_PIXEL shall not exceed 3m
big	8,4 W	25	128 PIXIE	The overall length of the cable between two Pixie_PIXEL shall not exceed 10m

For each 48 VDC driver the maximum number of pixie that can be connected to the same power supply/signal line varies according to the power of the pixie used. It is not possible to connect small **Pixie_PIXEL small** and **Pixie_PIXEL big** to the same line.

Pixie_PIXEL_small

Pixie_PIXEL_big

Ø151mm

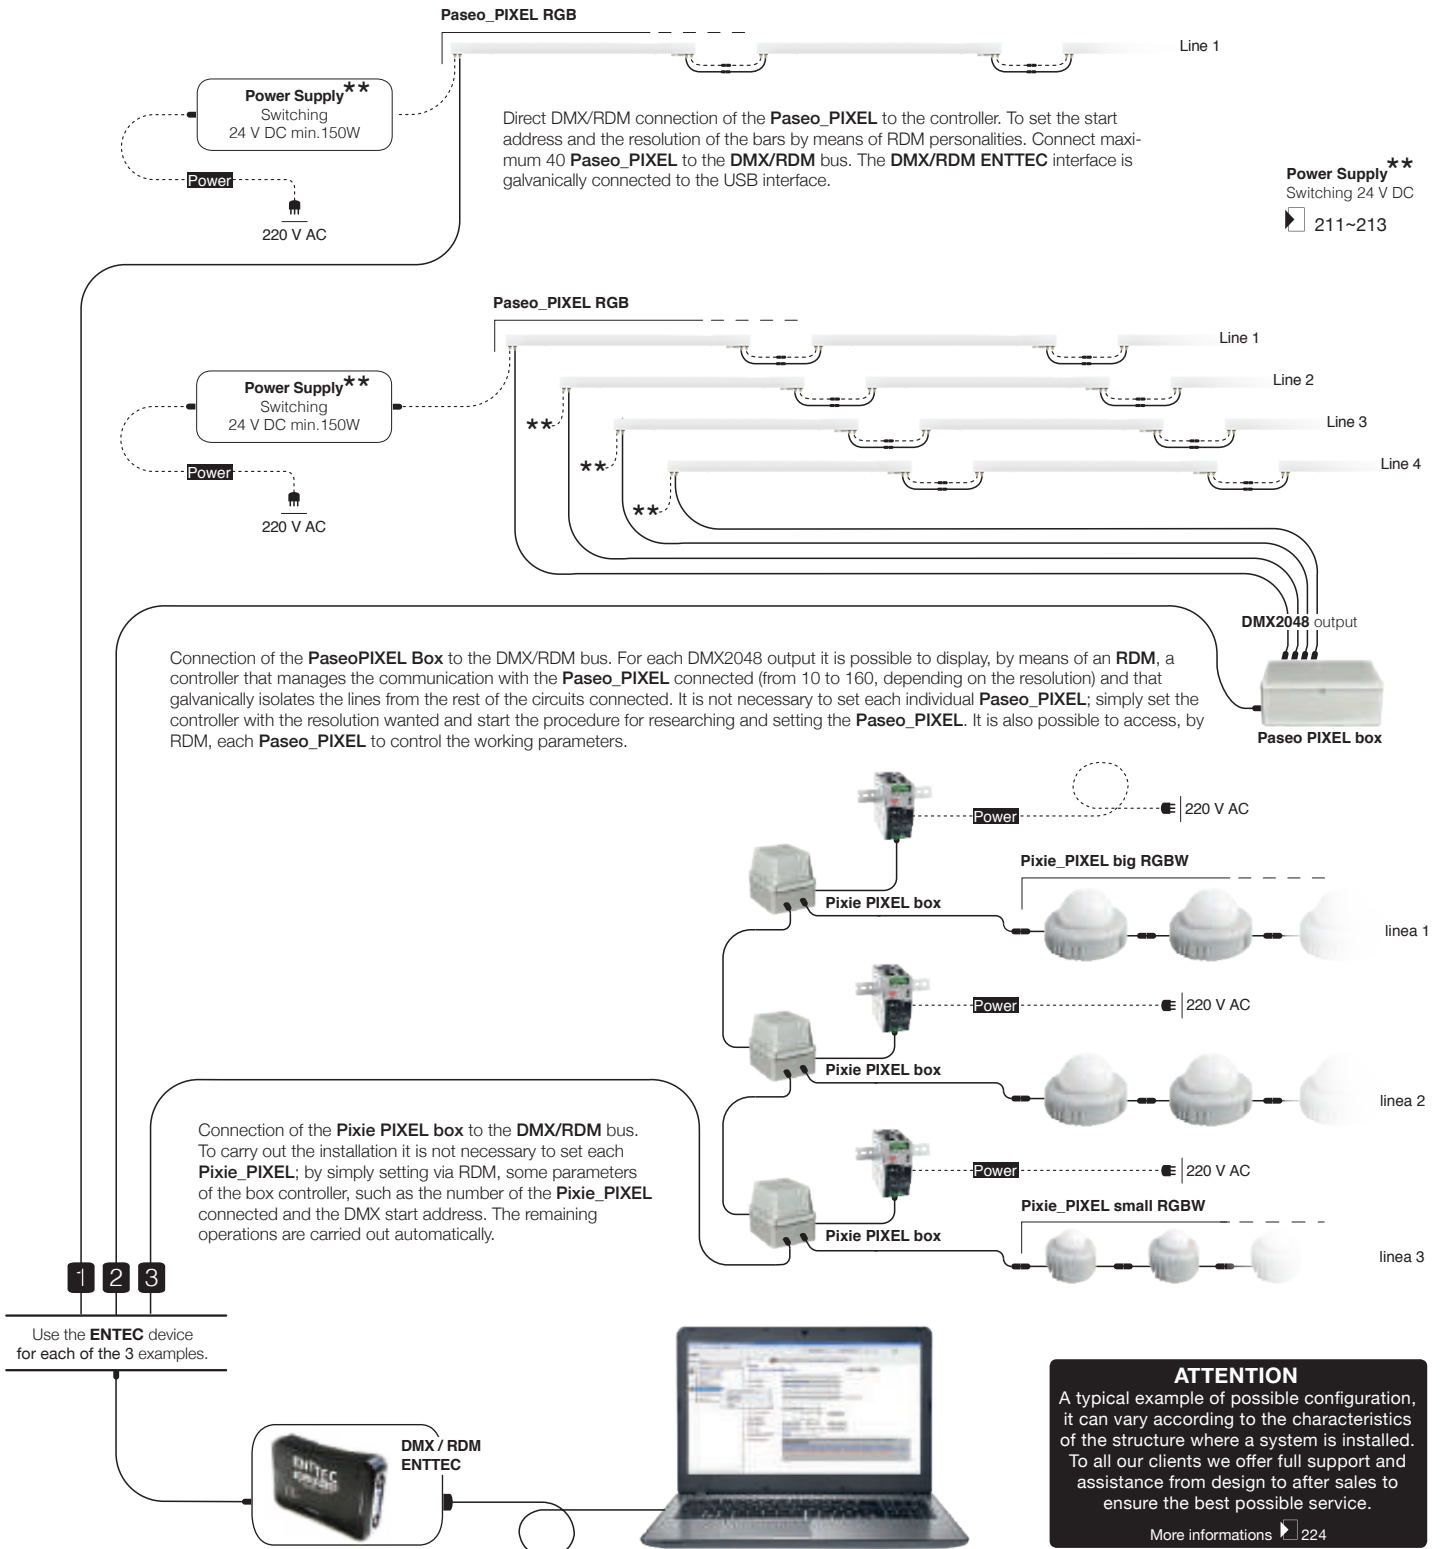

Paseo_PIXEL RGB / Pixie_PIXEL RGBW

Planning and Control

SETTING:

Paseo_PIXEL RGB and Pixie_PIXEL RGBW can be set by the user and controlled via DMX 512/RDM. If a standard technology is used (DMX / RDM), there are no limits as to the control system to be used. For systems without RDM support, we recommend Enttec Dmx Usb Pro Mk2 for the configuration of the items to be set. Specifically, the configuration consists in setting the start DMX address and setting the number of LEDs per pixel to be used. 3 possible setting examples are reported hereafter.

U_N	I_N	I_{MAX}	I_{TOT}	U_{OC}	U_P	
230V AC	5kA	10kA	20kA	10kV	$\leq 1.5kV$	99341
U_N	Nominal operating Voltage					
I_N	Nominal impulse discharge current					
I_{MAX}	Total impulse current (L+N+PE)					
I_{TOT}	Max. total impulse current (L+N+PE)					
U_{OC}	Surge protection level [L-N] [L+N+PE]					
U_P	Voltage protection level [L-N] [L/N-PE]					

Surge arrester for T3 indirect strikes (CEI EN 61643-11/A11) with test class III (CEI EN 61643-11 Ed.1).
 Multi-pole surge arrester with spark gap and varistors connected in series to active phases.
 Combined construction with trigger with limitation.
 No leakage current.
 No follow mains current due to the varistor/spark gap combination.

INSTALLATION NOTICE

The installation of one surge arrester only on each line input may not ensure effective protection for the whole system.
 Lighting fixtures installed at 10 m downstream the surge arrester are considered as 100% protected.
 If the cable length between the surge arrester and the lighting fixtures exceeds 10 m, protection should be enhanced by placing another surge arrester near the lighting fixtures that need to be protected (within 10 m).
 Maximum protection is achieved by installing the surge arresters as described above for each system line.

DMX Controllers & Accessories

Stick_GU2 | DMX Controller

Mode controller: colour, scene and dimmer.
 The Scene mode allows for a series of pre-set values to be retrieved.
 The Dimmer function allows for the intensity to be changed while a programme is running.
 The Colour mode allows for a series of pre-set static colours to be retrieved.
 All functions can be configured using hardware manager (enable/disable the different modes, select starting backdrop, etc.).

type	signal output	connector	input

Stick_DE3 | DMX Controller

Zone controller to activate up to 10 scenes simultaneously.
 Dimmer to adjust luminous intensity and saturation.
 Controller of up to 50 scenes with the possibility of choosing between dynamic and static. The arrows allow for the active scene to be changed.
 Colour controller to choose among 16 million colours. The arrows allow for RGB values to be entered.
 Possibility of increasing or decreasing the speed of dynamic scenes and colour effects.

Splitter | Optical Isolator 6OUT DMX/RDM

The DMX-512 Splitter takes the input DMX signal and sends it again to the 6 DMX output ports. The Splitter can also work as a signal amplifier since each port supports another 300-metre-long connection. This splitter complies with the RDM protocol for the bidirectional communication on the DMX. Device suitable for DIN Omega 35mm rail mounting.

Paseo_PIXEL box | Artnet DMX controller for Paseo_PIXEL

F III C.V. DMX 512

Required to control the PASEO PIXELs in high pixel density mode.
Bridge RDM for Paseo setting.
It supports 16 DMX universes by means of ARTNET or sACN protocol.
It generates the RS-485 signal required by the PASEO PIXELs.

type	signal output	signal input	connector	Power input	
White	4 Paseo cable	DMX512/RDM ETHERNET (Artnet, sACN)	5 Pin M12	120~240V AC	99388

98493	99346	84865
5 m extension M 5 pin M12 M 5 pin XLR	Connector M 5 pin XLR	DMX cable

Inside box | Components

Local Power Supply +12V Class II, the maximum absorbed power is 8W.
Pixel Controller Unit: it generates a data stream for Paseo_pixel starting from the received Ethernet signal with Artnet or sACN protocol.
The controllers guarantee galvanic isolation between the signal lines to avoid the propagation of electromagnetic interferences and they manage PASEO_PIXEL configuration and automatic programming in case of maintenance or initial installation. Each input and output port is protected against transient overvoltage events (such as electrostatic discharge).

FULL SERVICE

To all our clients we offer full support and assistance from design to after sales to ensure them the best possible service. Our support which is provided at the international level includes advice by highly qualified personnel (light designers, technicians, engineers, electronic programmers ...) within the lighting.

If necessary we offer a full service that includes:

- Study of the lighting project and customer requests (light designers and technical department i-LèD)
- Creating 3D rendering of the project (dialux) or an animated simulation for systems with PIXEL Technology
- Quotation and assistance in compiling the order
- Assistance and verification of commissioning of the lighting system

Our long experience in LED lighting has led us over the years to accomplishing thousands of projects around the world, meeting our customers' demands. We offer custom solutions and custom product creations. Thanks to the i-LèD solutions, thousands of kW have been spared all over the world.

We also provide support and assistance in the after sales service to provide the best possible service. **Linea Light Group** offers a complete service to handle all your requests. Through technical support, the customer receives first assistance and all the necessary information. Contact us at the following e-mail address:

support@linealight.com

Product name

Summary Index

Archiline_F

Powered by **CREE LEDs**

Un profilo in alluminio anodizzato forato a 180° con caratteristiche della massima resistenza ed elasticità. Disponibile con varie tipologie di optiche, lunghezza e potenza. Disponibile anche in versione **ROSEW** per creare effetti cromatici suggestivi (con miscelazione del colore uniformemente distribuita). Su richiesta l'articolo è disponibile con alimentatore incorporato in versione DALI a 120V. Basso indice di connettività IP68.

Difesa termica passiva (Coppia di alluminio)

Gestione della luce
Selettore regolabile per la massima flessibilità progettuale.

Apparecchio robotizzato - RIG
Apparecchio robotizzato con l'apertura in vetro chiaro temperato, spessore 12 mm, garantisce una lunga vita anche per il massimo cambio di colore.

	Archiline_F Anti-glare	ON/OFF high-LD white with beam light	12,3 W 18,8 W 36,6 W	301 mm 501 mm 1001 mm	3000°K 4000°K	Spot Flood Medium Flood Eclair. 20°x20°
		Archiline_F ROSEW	ROSEW DMK high-LD white with beam light	12,3 W 22 W 44 W	301 mm 501 mm 1001 mm	ROSEW

Archiline_F è un profilo con dissipatore NO o **ROSEW** in cui il colore è dato dalle cartucce appositamente studiate.

Archiline_F è disponibile nella versione anti-glare per ridurre i riflessi e l'abbagliamento e quindi ottenere il massimo comfort visivo.
